

The Electrical Transmission and Distribution Partnership conceived of and subsequently developed the OSHA Electrical Construction Industry Outreach training course with the mind set of producing a non-traditional industry specific training course tailored toward employees involved with the construction and maintenance of power transmission and distribution systems. Members from each of the entities listed below worked diligently to develop and implement this industry changing and industry challenging training course. Persons attending this course will receive training in the following topics: *Introduction to OSHA; Electrical Safety; Safe Grounding Practices; Personal Protective Equipment; Job Briefings; Confined and Enclosed Spaces; Lifting and Rigging; Excavations; and Fall Protection for the Electrical Industry.* Each module is tailored specially toward the power transmission and distribution industry. Although this course is based on the current OSHA 1910 and 1926 standards, the course material discusses standards and industry accepted best practices along with such non-traditional subjects as equal-potential grounding, flame resistant clothing, electrical arc protection, and pre-job briefings. Students completing the ET&D Construction Industry Outreach course receive a traditional OSHA 10-Hour for Construction card which contains ET&D designation language.

Course	Contact Time
Intro to OSHA	1 Hour
Electrical Safety	2 Hours
Grounding	2.5 Hours
Personal Protective Equipment	1 Hours
Rigging & Lifting	1 Hour
Confined/Enclosed Spaces	1 Hour
Trenching & Excavation	1 Hour
Fall Protection	1.5 Hours
Pre Job Briefings	.5 Hours
